Enterprise Visitor Management

Solution Delivered

- UI/UX
- Tech Stack upgrade from legacy system (JSP) to latest java-springboot with angular following microservices architecture
- Flutter app for kiosk
- Integration with multiple third party applications.
- Integration with hardware (facial recognition, door access control, boom barrier)
- Extensive analytics engine
- Emergency evacuation feature

BridgeInvest (UK)

Bridge Invest is a comprehensive Customer Relationship Management (CRM) and Loan Management System (LMS) designed to streamline the money lending process by automating its workflow. This system is highly advantageous as it enables efficient storage and management of all customer information, facilitates the creation of new loans, and maintains accurate records of financial statements for lenders. Moreover, the system provides valuable analysis and insights to help automate the entire loan cycle.

A screenshot of the Bridge Invest web application interface. The top navigation bar includes 'Dashboard', 'CRM', 'Loans', 'Maps', 'Calculator', and 'Reports'. Below this is a secondary menu with 'Borrowers', 'Funders', 'Valuers', 'Solicitors', 'Staff', 'Referrers', and 'Others'. The main content area is titled '<<Entity name>>' and features a 'Delete Entity' button. A sub-menu includes 'General', 'Contacts', 'Notes', 'Loans', 'Securities', and 'Bank details'. The 'General' tab is active, showing a form with fields for: Entity name (text input), Entity memo (text area), Status (dropdown), Source (dropdown), Fee Expectation (text input), Primary RM (dropdown), Secondary RM (dropdown), Is blacklisted (checkbox), Blacklisted reason (text input), First Enquiry date (date picker), Last Enquiry date (date picker), Address (text input), Town or city (text input), County (text input), Post code (text input), Country (dropdown), Website (text input), Email (text input), Switchboard (text input), Company registration number (text input), and LinkedIn Profile URL (text input). There is also an 'Add a photo' button and an 'Edit Address' button.

Tour Management System (USA)

The visitors to Akshardham facilities are divided into 2 categories -

- a) Those who visit by selecting in one of the pre-scheduled trips
- b) Special visitors who are looking for a customized tour of the Akshardham premise

The application must be able to manage both these categories of visitors. The second category is called a customized tour because the following parameters are variable in nature

- Selection of date & time of tour with 2 preference choices
- Preference of duration of tour
- Preference of food/meals
- Preference of visit points within Akshardham premise
- Option of meeting with Shri Sant Swamiji

GLOBALVOX

Kataria Group, India's second largest auto distribution group, is one of the fastest flourishing business conglomerates in India. Since 1956, Kataria group now has more than 7000 employees serving more than 1 million gratified customers, with a turnover of over USD 600 million. Kataria Group forayed into insurance business in 2014. Since then they have issued policies to thousands of customers. They were looking for a portal to target potential insurance seekers. The portal has to be competitive, easy-to-use, support multiple languages, educative and a assistive user journey.

The screenshot displays the Policy Leader insurance portal interface. At the top, there is a navigation bar with the following items: Home, About Us, Products (with a dropdown arrow), POSP, More (with a dropdown arrow), and Contact Us. On the right side of the navigation bar, there is a 'Languages' dropdown menu. Below the navigation bar, the main content area is organized into a 2x3 grid of cards, each representing a different insurance category. Each card features an illustration, a title, a brief description, and a 'Read More...' link.

Land Governance system for Uganda Government

Project Name

Land Governance - Buganda Land Board (BLB)

Client

Republic of Uganda, Buganda Land Board (Govt. of Uganda)

Location

Uganda (Africa)

Domain

E-Governance

Technology

Java, mySql, Flutter app, Python, Palm vein biometrics, Facial Recognition Biometrics, AI based inhouse FR algorithm

Land Governance system for Uganda Government

Objective

- Digitization of land records to contain corruption and other illegitimate claim of lands
- Build a digitized land title and identity vetting solution in the Kingdom of Buganda (Uganda), aka The Digital Land Electronic Registration & Compliance System.
- Land titles have been held onto in the traditional manner, between tribes, owners, leaseholders and traditional grants for a multitude of years in remote areas and up country - the intent is to eventually have all of them subscribe to this platform.
- Ensuring a secure land title for every landowner
- Enabling biometrics-based land title verification
- Digital land records for ease of transactions
- Land registry and land board MIS integration for the use of digital records across the system
- Enabling the system to be used for land sales, transfers, change of use and other transactions
- Providing ease of payment using m-PESA (mobile money) capabilities
- Add additional services over time

Land Governance system for Uganda Government

Scope

- Cover all land-owners in the Kingdom, estimated at up to 5 million.

Solution Delivered

- We created an LE Card (Land Electronic Card) for each land-owner
- This card was an RFID card with a unique identifier
- The identifier was linked to the land-owner via biometrics (face recognition, finger-print and palm vein records)
- Interface 1: Mobile application for land-owners
- Interface 2: Mobile application for field-executives – which are executives of the government to collect taxes, map land parcels and more
- Interface 3: Web based admin panel to manage all land records, allocate geographies to field executives, manage tax collection
- Interface 4: Biometric integrations

Land Governance system for Uganda Government

Innovation & Integrations

- Introduction of palm vein technology (patented by Fujitsu) – far advanced as compared to fingerprints.
- Inhouse developed facial recognition technology
- Integration with banks where-by showing the LE Card and palm vein (and/or facial recognition) ownership of a land parcel is established. This can be then utilized to issue loans to the land-owners.
- Setup of small kiosks with hardware to register, capture facial biometrics, capture palm veins and fingerprints and finally print a Land Electronic RFID card on the spot.

Kenya Trade Network Agency (Kentrade)

Introduction

- Kenya Trade Network Agency (KenTrade) is a State Corporation under the National Treasury established in January 2011 to establish, implement and manage the National Electronic Single Window System (KenyaTradeNet System) and to facilitate trade.
- Kenya TradeNet System is an online platform that serves as a single entry point for parties involved in international trade and transport logistics to store documents electronically, for processing, approvals and to make payments electronically for fees, levies, duties and taxes due to the Government, on goods imported or exported in the country.

Kenya Trade Network Agency (Kentrade)

Scope & Objective

- Develop a **Watchlist Screening** platform for the Kenyan Trade Lobby (**Kentrade**) to rapidly identify individuals against multiple national and international lists.

Solution Delivered

- Watchlist Screening (Individual Entity)
- Single and Multiple Screening
- Quick Search
- Subscription Model
- Watchlist management
- Screening History Management
- Sub-user management

The screenshot shows the KenTrade website's "Quick Search" interface. On the left, there is a form with input fields for "Entity Name*", "City", "State", "Select Country" (a dropdown menu), "Zip Code", and "Address". On the right, there is a "Denied Party Lists" section with a search bar and a list of selected screening lists. The selected lists are: "ABL - US Treasury Anti-Boycott Lists", "ADF - Australian Department of Foreign Affairs and Trade", and "ASIC - Australian Securities and Investments Commission, Enforceable Undertakings and Banned Organizations". A partially visible list item at the bottom is "ATE - US Bureau of Alcohol, Tobacco, Firearms and Explosives". The top right of the page features "LOGIN" and "REGISTER" buttons.

Screening List	Selected
ABL - US Treasury Anti-Boycott Lists	<input checked="" type="checkbox"/>
ADF - Australian Department of Foreign Affairs and Trade	<input checked="" type="checkbox"/>
ASIC - Australian Securities and Investments Commission, Enforceable Undertakings and Banned Organizations	<input checked="" type="checkbox"/>
ATE - US Bureau of Alcohol, Tobacco, Firearms and Explosives	<input type="checkbox"/>

Progreso de Obregón	
Municipality and community	
	
Location in Mexico Coordinates:  20°15'N 99°11'W	
Country	Mexico
State	Hidalgo
Municipal seat	Progreso de Obregón
Area	
• Total	106 km ² (41 sq mi)
Population (2005)	
• Total	4,630

Cartography & Tax Collection System – Mexico Government

Introduction & Scope

- There are hundreds of counties in Mexico where less than 50% of the properties are registered for tax. This causes huge revenue loss to the Property Tax department.
- Also a very high %age of these properties have wrong purposes. For eg. a piece of land with a office building on it – would be showing as an open parcel of land in the department records. This also results in revenue loss.
- Also the current software system used by the department was 20+ years old and desktop based (developed in visual pro). The executives literally move data from one computer to the other using pen drives or over local network.
- The scope was to redesign the entire software – also develop mechanisms to capture maximum territory under tax bracket. Additionally, it was to be made sure that the registered purpose of the property and the actual usage of the property are in sync.
- We had to develop the catastro software, finance department software, public registry software integrations and a smart card.
